

Guideline

Please submit your solutions in a single PDF on Blackboard. Multiple submissions are possible before the due time; the last submission will be graded.

Exercise 1.(points = 10)

Let $A = \{1,2,3,4\}$ and $B = \{a,b,c\}$. Give an example of a function $f: A \rightarrow B$ that is neither one-to-one nor onto. Diagrams will suffice.

Exercise 2. (points = 18)

Consider the sine function $\sin: \mathbb{R} \rightarrow [-1, 1]$. Determine

1. whether this function is one-to-one and
2. whether it is onto.

Explanation is not needed.

Exercise 3.(points = 18)

A function $f: \mathbb{Z} \rightarrow \mathbb{Z}$ is defined as $f(n) = 2n + 1$. Determine

1. whether this function is one-to-one and
2. whether it is onto.

Explanation is not needed.

Exercise 4.(points = 18)

A function $f: \mathbb{Z} \rightarrow \mathbb{Z} \times \mathbb{Z}$ is defined as $f(n) = (2n, n + 3)$. Determine

1. whether this function is one-to-one and
2. whether it is onto.

[Hint: a pair (p,q) is equal to another pair (p',q') if and only if $p = p'$ and $q = q'$.]

Explanation is not needed.

Exercise 5.(points = 18)

A function $f: \mathbb{Z} \times \mathbb{Z} \rightarrow \mathbb{Z}$ is defined as $f(m,n) = 2n - 4m$. Determine

1. whether this function is one-to-one, and

2. whether it is onto.

Explanation is not needed.

Exercise 6.(points = 18)

A function $f : \mathbb{Z} \times \mathbb{Z} \rightarrow \mathbb{Z}$ is defined as $f(m,n) = 3n - 4m$. Determine

1. whether this function is one-to-one and
2. whether it is onto.

Explanation is not needed.
